

# June 10, 2021 Solar Eclipse in 104 localities across Canada

The **appearance** of the eclipse at the time of maximum is shown for each location. Also indicated is the **local time** (24-hour clock), the **percentage** of the surface of the Sun covered by the Moon, and the **elevation** of the Sun above the horizon. The mention "Rise" and an asterisk next to the time mean that the maximum has already passed when the Sun rises at that location; in those instances, the figure shows the aspect of the eclipse when the Sun completely clears the horizon. The zenith is at top and the white tick indicates the direction toward the North Celestial Pole.
