

APPRENTICE RESEARCHERS

For Teachers

ZOOLOGISTS

**Corrected
version**

Here are some suggestions to help you carry out this activity, part of a project-oriented teaching approach:

- * Use the sheets your students completed when they visited the Naturalia room.
- * Use white Bristol board.
- * Your models should be 104 cm (41 inches) wide and 18 cm (7 inches) high. This is the actual size of the interpretation panels in our ecosystems.
- * Students can make their panels in English or French. Having them translate their texts is a way of making this a multidisciplinary project.
- * Have students present their panels in the classroom and display the panels at your school.
